EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Others: CI/CD, Git, Node.js, Google Cloud, Kafka
AWS Services: API Gateway, CloudFormation, CloudFront, CloudWatch, EC2, Lambda, RDS, S3, Step Functions
Languages: Python, JavaScript/TypeScript, Java, Rust
Frameworks: FastAPI, FastMCP, LangGraph, LangChain, LangSmith, React, Sprint Boot, PyTorch
Databases: PostgreSQL, Redis, MongoDB
AI: Codex, Claude code, Pi coding-agent

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - present</i>
- Built internal platforms for engineering productivity by translating intents into safe, validated tool calls across 1000+ platform endpoints, enabling self-service operations. - Built CLI tools and internal APIs that generated Terraform, Helm, and Kustomize scaffolds for faster developer workflows and orchestrated Docker workloads on a Kubernetes platform with policy guardrails, repeatable deployment patterns, container orchestration, and GitOps releases; added observability (Langfuse, LangSmith, tracing, structured logs) to debug issues, improve reliability, and tighten CI/CD loops that cut latency by 60% and LLM API costs by 50%.	

AI Researcher Pace Artificial Intelligence Lab	New York City, NY <i>Sep 2025 - Dec 2025</i>
- Built reproducible training workflows for StyleGAN and Stable Diffusion using CUDA, PyTorch, and LORA (Low-rank Adaptation) on an HPC cluster, applying infrastructure as code discipline. - Used vLLM and Hugging Face release paths to tighten inference deployment patterns, runtime observability, and secure model serving.	

Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic Storage Service with Python, PostgreSQL, and Redis exposing signed-URL APIs across Google Cloud Storage, S3, and MinIO, aligning with multi-cloud AWS and Azure targets. - Contributed to an IAM platform with React, Spring Boot, and AWS supporting thousands of users across 30+ applications while balancing developer velocity with security and compliance, and implemented AWS Step Functions workflows that prevented AWS Lambda timeouts and improved production reliability.	

PROJECTS

Dark Factory - Orchestrator for AI coding CLIs <i>Crosstern, Ratatui, Y-crdt</i>	github.com/ozzyozbourne/dark-factory
- Implemented full CLI I/O ownership through PTY interception, enforcing command-level safety checks and shell execution guardrails. - Enabled distributed ralph loops via Y-crdt coordination for resilient multi-node agent workflows. - Built an event-driven orchestration model that broadcasts real-time updates, improving platform observability and eliminating polling overhead.
