EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, Rust, Html/Css

Backend & Frameworks: Spring Boot, FastAPI, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse

Databases: PostgreSQL, MongoDB, Redis

AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway

Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built a **Python / FastAPI** multi-agent CRM backend that routes **REST-based web services** across 40+ specialized sub-agents for 10,000+ users, with secure access control, **XML/JSON** data mapping, and production paths to **debug, troubleshoot**, and analyze complex system interactions
- Designed a durable workflow layer with **React Flow, Temporal**, and **Redis** to run resumable jobs, surface live execution state, and recover cleanly from failures in distributed execution and cloud handoffs
- Built **GitHub Actions CI/CD** pipelines for **Docker** and **Kubernetes (k8s)** deployments, running **OpenTelemetry** trace-based evals to gate releases on latency, accuracy, and safety across the software development life cycle
- Created a production **FastMCP** server exposing 160+ backend actions with **OpenTelemetry** monitoring and **Pydantic** validation, improving API behavior documentation and failure-mode visibility for internal automation
- Automated daily PR triage across 25-30 PRs/week by integrating **OpenAI Codex** with a custom Bitbucket **MCP** server, reducing manual reviewer load and tightening quality assurance

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** for a **microservices architecture**, using **OOP** and **design patterns** to isolate storage adapters across **relational** and **NoSQL databases (PostgreSQL, Redis)**, **AWS S3**, **Google Cloud Storage**, and **MinIO** via expiring signed URLs
- Reduced **SQL** query latency and improved scalability by optimizing **PostgreSQL** with window functions, materialized views, and indexes, then exposed the data via interactive **React** visualizations for business stakeholders
- Orchestrated long-running jobs with **AWS Step Functions**, **Lambda**, and **message queues**, reducing timeout failures and improving error recovery across 100K+ weekly executions while supporting production troubleshooting and incident response

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that breaks large requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries, timeout handling, and failure isolation
- Modeled the system as a reliable control plane for large-scale distributed systems experimentation, keeping task execution deterministic enough to debug, rerun, and extend as new agent capabilities were added
