Dear Hiring Team,

I am excited to apply for the Software Engineer position at Fiserv. I bring over three years of experience delivering production backend systems, along with an M.S. in Computer Science from Pace University, and I am motivated by roles where reliability, security, and performance are core engineering requirements.

At Sperse, I designed and maintained backend services and APIs for a microservice architecture that handled safe execution across 1000+ platform endpoints. I implemented asynchronous messaging, event-driven workflows, and service-to-service communication while meeting functional and non-functional requirements in distributed systems. I also built observable and secure services with health checks, structured logging, metrics, and tracing, and shipped containerized payloads for Kubernetes deployments across Docker and Kubernetes runtimes in Linux-based environments. This work reduced latency by 60% and LLM API cost by 50%, and directly aligns with Fiserv's focus on production-grade services and runtime troubleshooting.

At Qualitest, I designed a cloud-agnostic storage service using Python, PostgreSQL, and Redis across Google Cloud Storage, S3, and MinIO while applying isolation, service boundaries, API design, and backwards-compatible changes. I also contributed to Identity & Access Management services using Java (Spring Boot) RESTful APIs and gRPC services on AWS, and supported engineering quality through code reviews, automated testing, documentation, CI/CD improvements, incremental delivery, and Scrum Agile events. These experiences prepared me to contribute meaningfully to Fiserv's product development team and engineering standards.

Fiserv's aspiration to move money and information in a way that moves the world, and its purpose of delivering superior value through leading technology, targeted innovation, and excellence, strongly resonates with me. I would value the opportunity to bring disciplined systems engineering, clear technical communication, and collaborative execution to Fiserv's mission. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your consideration.

Sincerely,
Osaid Khan
