EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: *TypeScript*, *Java*, JavaScript, Python, C++, SQL, HTML/CSS

Full-Stack & APIs: *React*, Spring Boot, FastAPI, *RESTful services*, API design, object-oriented programming (OOP)

Data Persistence: *PostgreSQL*, MongoDB, Redis, Pgvector, SQL and NoSQL

Build & Deployment: *Git*, *Jenkins*, *Docker*, GitHub Actions, CI/CD, Kubernetes, AWS Lambda, Step Functions

AI & Quality: Generative AI APIs, machine learning models, LangGraph, LangChain, LlamaIndex, testing, peer code reviews

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Designed, developed, tested, and deployed a **full-stack software application** across **React/TypeScript UI, RESTful API, and PostgreSQL data layers**, enabling 10,000+ users to build and run durable AI workflows
- Built robust **data integration capabilities** in **Python/FastAPI** through a FastMCP server exposing 160+ validated backend actions, giving **Generative AI APIs** and intelligent automation features secure access to multi-tenant CRM data
- Integrated **machine learning models** into a multi-agent platform with **LangGraph** and **LangChain**, routing requests across 40+ specialized agents while enforcing tenant-aware access control and production monitoring
- Investigated and resolved **production incidents, service requests, and application issues** using Redis progress telemetry and OpenTelemetry traces; added GitHub Actions **CI/CD** quality gates for latency, accuracy, and safety
- Collaborated with **cross-functional teams** to analyze and refine user stories, review code and solution designs, and ship maintainable capabilities using **Git, Docker**, object-oriented programming principles, and AI-powered tools

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed and implemented a **Java/Spring Boot RESTful service** with PostgreSQL and Redis for uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO via expiring signed URLs
- Improved API and data-layer scalability by applying **SQL** window functions, materialized views, and indexes in PostgreSQL, then delivered **React/JavaScript UI** visualizations that clarified requirements for business stakeholders
- Supported testing, deployment, and application issue resolution for long-running jobs orchestrated with **AWS Step Functions** and Lambda, improving error recovery across **100K+ weekly executions**
- Participated in **peer reviews** of code, system configurations, and technical designs in an agile, collaborative environment, using Git, Jenkins, and Docker to improve quality and maintainability

PROJECTS

Dark Factory - orchestrator for PI agent | *TypeScript, REST APIs, Docker* github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that converts requirements into dependency-aware task DAGs and coordinates AI-powered tools across multiple machines with validated API calls, retries, and timeout handling
- Applied object-oriented design, source control fundamentals, and containerized deployment to make asynchronous automation components independently testable, maintainable, and resilient
