Dear Hiring Team,

I am writing to apply for the **Software Engineer - Implementation** role with **Just Appraised**. My background is in backend systems, integrations, and production automation: at Sperse I built a **Python**, **LangGraph**, **LangChain**, and **FastAPI** CRM platform serving 10,000+ users across 40+ specialized sub-agents, created a **FastMCP** server exposing 160+ backend actions, and wired **GitHub Actions CI/CD** with OpenTelemetry trace-based evals to catch latency, accuracy, and safety regressions before release. That work maps closely to your implementation needs around system integration, production reliability, and owning technical solutions end to end.

At Qualitest, I built a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** that handled uploads, downloads, and deletions across **AWS S3**, **Google Cloud Storage**, and **MinIO** through expiring signed URLs. I also optimized **PostgreSQL / SQL** with window functions, materialized views, and indexes, and orchestrated long-running jobs with **AWS Step Functions** to reduce **AWS Lambda** timeouts and improve recovery across 100K+ weekly executions. That experience has made me comfortable working inside unfamiliar systems, translating operational constraints into practical architecture, and supporting reliability across heterogeneous environments.

Just Appraised's mission of enabling local government employees with tools, technology, and support so they can deliver exceptional service to taxpayers resonates with me, especially alongside the values of "We listen, we understand, we deliver" and the focus on using AI to solve real problems in government. I appreciate the emphasis on real customer problems, accountability, and building workflows that work in the real world. I would welcome the opportunity to bring that same pragmatism to property-data integrations, onboarding automation, and the customer implementations that support your mission.

Sincerely,
Osaid Khan
