Dear Hiring Team,

I am excited to apply for the AI Developer position at Smith & Wesson, and I am fully willing to relocate to Maryville, TN for this onsite role. I bring hands-on experience building production conversational AI and agentic AI systems in Python, with a strong foundation in enterprise integrations, observability, and secure execution.

At Sperse, I engineered an enterprise-grade conversational AI and agentic AI MCP server layer that translated natural-language requests into safe, validated tool-calling across 1000+ platform endpoints while standardizing REST API usage for low-code and pro-code teams. I also implemented grounded response controls with safety filters and built Langfuse/LangSmith tracing and evaluation workflows to improve audit trails, reliability, and failure diagnosis in production AI operations. These are the same engineering disciplines required to deliver governed assistants and autonomous workflows tied to internal services.

Earlier at Qualitest, I built an internal chatbot using LangChain and Retrieval-Augmented Generation (RAG) with PostgreSQL vector storage, reducing ticket resolution time by 20% through grounded natural-language Q&A over enterprise documentation. I also built Python/PostgreSQL/Redis service APIs for secure file operations across S3, Google Cloud Storage, and MinIO, and contributed to identity and access management integrations supporting 30+ internal applications. That combination of RAG implementation, API/database integration, and authentication/authorization support aligns closely with your goals for enterprise AI modernization.

Smith & Wesson's emphasis on innovative, high-quality products and trusted performance resonates strongly with how I build software: safety-first execution, measurable reliability, and clear technical communication. I am especially motivated by your commitment to responsible use, integrity, and long-term value for employees, customers, and stakeholders, and I would welcome the opportunity to help advance that mission through scalable conversational and agentic AI solutions.

I would value the opportunity to discuss how my background can support Smith & Wesson's AI initiatives. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your consideration.

Sincerely,
Osaid Khan
