EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, SQL, Rust, HTML/CSS
Full Stack & APIs: React, FastAPI, Spring Boot, REST APIs, distributed services, accessible user interfaces
Cloud & Data: AWS, PostgreSQL, MongoDB, Redis, pgvector, data pipelines, containerization, Docker, Kubernetes
Quality & Operations: Git, CI/CD pipelines, GitHub Actions, secure coding, observability, reliability, incident response
AI Development: OpenAI Codex, Claude Code, LangGraph, LangChain, LlamaIndex, OpenTelemetry

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Developed and operated distributed, scalable, secure full-stack cloud services for a multi-agent CRM platform serving 10,000+ users, routing requests across 40+ agents through validated Python/FastAPI APIs - Built accessible React and TypeScript user interfaces backed by Temporal services, owning end-to-end features, data contracts, code reviews, production troubleshooting, and reliability improvements - Created an OpenAI Codex integration with a custom Bitbucket MCP server, automating daily PR triage across 25-30 PRs per week and improving developer effectiveness through AI-assisted development - Implemented service observability and progress tracking with Redis and OpenTelemetry, supporting incident diagnosis, retry-based recovery, and operational best practices for long-running distributed workflows - Built GitHub Actions CI/CD pipelines with automated trace-based evaluations, catching latency, accuracy, and safety regressions before releases and strengthening maintainable, well-tested code	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic backend service in Java and Spring Boot with PostgreSQL, Redis, and REST APIs, securely processing file operations across AWS S3, Google Cloud Storage, and MinIO - Extended backend data services and built React visualizations for business stakeholders, optimizing PostgreSQL with indexes, window functions, and materialized views to reduce query latency - Orchestrated 100K+ weekly data-processing jobs with AWS Step Functions and Lambda, improving distributed-service reliability, timeout handling, and automated recovery at production scale - Participated in design and code reviews, wrote unit tests, and supported CI/CD, deployments, troubleshooting, documentation, and agile collaboration across technical and business teams	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed coding-agent orchestrator that converts large requests into dependency-aware task DAGs and executes them across multiple machines with retries, timeout handling, and observable status updates - Implemented fault-tolerant scheduling and Git-based workflows, preserving dependency order while recovering safely from failed executions and improving multi-agent developer productivity
