EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

AI/Agents: LangGraph, LangChain, LangSmith, Langfuse, LlamaIndex, FastMCP, Claude Code, Codex

Languages: Python, JavaScript/TypeScript, Java, Go

Backend & Frameworks: FastAPI, Spring Boot, React

Others: Docker, Kubernetes, CI/CD, Git

AWS Services: Lambda, Step Functions, API Gateway, CloudWatch, EC2, RDS, S3, CloudFormation, CloudFront

Databases: PostgreSQL, Redis, MongoDB

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Sperse

Feb 2026 - Present

- Designed an **agentic AI** CRM system for **AI/ML integration** with AI orchestration frameworks (**LangGraph**, **LangChain**) and **FastAPI**, routing tenant-scoped requests through a **workflow orchestration** agent to 40+ specialized **AI agents** and workflow specialists
- Defined reusable agent patterns and **agent definitions and configurations** (objectives, behavioral instructions, **input/output contracts**, safety policies, tool rules), refactoring 500+ operations into typed dispatchers that replaced 60+ REST tools while meeting security requirements and improving tool selection accuracy by 90%
- Built trace-driven **AI testing and evaluation suites** in **LangSmith** and **Langfuse** with **gold-standard input/output validation**, **adversarial testing**, **regression testing**, and **tool-use validation** across prompts/model versions before releases
- Added **guardrail validation** with jailbreak regex, **Lakera Guard**, and SQLite checkpointing for **multi-turn conversational testing**; shipped **RAG** and workflow-generation agents producing reusable templates, workflow examples, implementation guides, and CRM code, reducing onboarding 50%

AI Researcher

New York City, NY

Pace Artificial Intelligence Lab

Sep 2025 - Dec 2025

- Built an agent-evaluation pipeline using **LLM judges** and reward models to rank multi-step tool-use runs, converting failed, degraded, or stale agent test results into prompt tuning inputs
- Implemented a **LangGraph** eval pipeline for **scope-boundary testing** and tool-call scoring, selecting high-performing traces to tune prompts and increasing tool-call success by 50%
- Documented validation frameworks and model-version comparisons for multi-step agents, giving stakeholders repeatable testing methodologies for prompt engineering and agent behavior changes

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Built **CI/CD** software delivery pipelines with **Git-based version control**, **Docker**, **Kubernetes**, and GitHub Actions, strengthening SDLC
