Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **AI Engineer – Clinical Data Science** role with your **major pharmaceutical organization**. I bring over three years of engineering experience building production AI systems and a strong academic foundation as a Master of Science in Computer Science graduate from Pace University.

In my current role at Sperse, I build end-to-end AI systems that align directly with your core responsibilities in generative AI, automation, and agentic orchestration. I developed an MCP interaction layer that translates natural-language intents into safe, validated tool calls across **1000+ platform endpoints**, enabling LLM-powered automation for clinical reporting workflows and document generation workflows. I also built AI-driven code generation pipelines with human-in-the-loop quality gates, and architected multi-agent workflows using **LangGraph**, **LangChain**, and **Google ADK** on **Google Vertex AI**. This includes document understanding and RAG pipelines for **PDFs** and **Word/DOCX** extraction, parsing, table detection, and structure recognition, with measurable outcomes including a **60%** latency reduction and **50%** LLM API cost reduction.

I pair that platform work with rigorous engineering discipline. At Qualitest, I delivered RAG capabilities using **LangChain** with a **PostgreSQL** vector store, reducing ticket resolution time by **20%** while improving document intelligence on unstructured sources. I designed cloud-agnostic storage services in **Python**, **PostgreSQL**, and **Redis** across **Google Cloud Storage**, **S3**, and **MinIO**, applying SOLID principles (single responsibility, dependency inversion, and interface segregation), design patterns, and maintainable testing practices. I also containerized ingestion services with **Docker** and orchestrated long-running imports with **AWS Step Functions**.

I am particularly motivated by your mission to improve clinical data processing and analysis, automate clinical reporting workflows, and accelerate data-driven decision making. I am equally aligned with the values this work demands: high output quality, reliability, and engineering judgement in regulated, high-impact environments. I would welcome the opportunity to contribute these strengths to your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
