EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css

Backend & Frameworks: FastAPI, LangGraph, LangChain, FastMCP, LangSmith, Langfuse, Spring Boot, React

Databases: PostgreSQL, Redis, MongoDB

AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway

Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built a **Python / FastAPI micro-services** platform for a multi-agent CRM, routing requests across 40+ specialized sub-agents for 10,000+ users with tenant-aware access control, reusable service layers, libraries, abstractions, and interfaces, and lazy-loaded tool context to keep runtime memory, throughput, latency, and performance predictable
- Built a **React Flow** and **TypeScript** workflow surface for agentic swarms, using **Temporal** to design durable, resumable orchestration paths that could evolve without painting the team into a corner
- Built an agentic code review pipeline integrating **OpenAI Codex** with a custom Bitbucket MCP server, automating daily PR triage across 25-30 PRs/week and reducing manual reviewer load by several hours while preserving human review gates
- Created a **FastMCP** server that exposed 160+ backend actions to AI agents, with **Pydantic** validation and built-in monitoring to keep reusable automation safe across multiple customers
- Added **OpenTelemetry** trace-based evals and **GitHub Actions CI/CD** guardrails for AI-agent releases, catching latency, accuracy, and safety regressions before production

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** that handled file uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs
- Reduced query latency and improved scalability by optimizing **PostgreSQL** with window functions, materialized views, and indexes, then exposed the data through interactive **React** visualizations for business stakeholders
- Orchestrated long-running jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts and improving error recovery across 100K+ weekly executions with clearer retry and failure handling

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries, timeout handling, and recovery paths
- Added scheduling logic that preserves dependency order and isolates work units so long-running agent jobs stay observable, resilient, and easy to extend
