EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Kikoff Stack: ReactJS, AWS, Ruby on Rails, Flutter, Vercel, JavaScript/TypeScript, Python, Java

Backend & Infrastructure: FastAPI, Spring Boot, REST APIs, cloud infrastructure, Temporal, Docker, Kubernetes, CI/CD

Data & AWS Services: PostgreSQL, Redis, MongoDB, S3, Lambda, Step Functions, EC2, RDS, CloudWatch

Engineering: Git, open-source development, early stage products and startups, system design, automated testing

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Owned a customer-facing **ReactJS** and **TypeScript** workflow product end to end, pairing visual composition with **Temporal** execution so 10,000+ users could create, run, and monitor durable agentic workflows
- Built production backend services with **Python** and **FastAPI**, routing requests across 40+ specialized agents with tenant-aware access control and exposing 160+ validated actions through **REST APIs** and FastMCP
- Strengthened **cloud infrastructure** and release craftsmanship through GitHub Actions **CI/CD**, OpenTelemetry trace-based evaluations, and automated latency, accuracy, and safety gates before production deployments
- Delivered live workflow progress through **Redis** and resumable Temporal jobs, translating customer needs into reliable product behavior through extreme ownership and clear communication with product and engineering coworkers

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a cloud-agnostic storage service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, handling uploads, downloads, and deletions across **AWS S3**, Google Cloud Storage, and MinIO via expiring signed URLs
- Built interactive **ReactJS** data experiences and optimized PostgreSQL (window functions, materialized views, indexes), reducing query latency while giving business stakeholders clearer operational insight
- Orchestrated 100K+ weekly executions with **AWS Step Functions** and **Lambda**, eliminating timeout-prone work and improving retry behavior, error recovery, and production reliability

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript, Open Source* github.com/ozzyozbourne/dark-factory

- Created an **open-source** distributed coding-agent orchestrator that converts large requests into dependency-aware task DAGs and executes them across machines with retries, timeout handling, and observable outcomes
- Applied startup-style zero-to-one product development and strong computer science fundamentals to deliver a maintainable developer tool with modular scheduling and fault-tolerant execution
