EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

AWS Services: CloudWatch, EC2, RDS, S3, Lambda, Step Functions, CloudFormation, CloudFront, API Gateway
Others: Kafka, CI/CD, Git, Node.js, Google Cloud
Languages: Rust, Python, Java, JavaScript/TypeScript
Frameworks: LangSmith, LangChain, LangGraph, FastAPI, FastMCP, PyTorch, React, Sprint Boot
Databases: PostgreSQL, Redis, MongoDB
AI: Claude code, Codex, Pi coding-agent

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - present</i>
- Engineered a high-availability observability layer using Langfuse and LangSmith to deliver centralized tracing, structured logs, and alerting infrastructure for 1000+ platform endpoints - Designed centralized monitoring for agentic workflows, implementing performance evaluations to improve latency by 60% and maximize high-volume data consistency at Reddit scale - Architected stateless serving pipelines and optimized application metrics routing to maximize KV-cache hit rate, reducing costs by 50% while accelerating observability feature delivery	

AI Researcher Pace Artificial Intelligence Lab	New York City, NY <i>Sep 2025 - Dec 2025</i>
- Optimized distributed training on an HPC cluster using CUDA and PyTorch, conducting performance evaluations to improve throughput for high-volume data collection - Managed highly available model serving with vLLM and Hugging Face, ensuring secure storage and high-volume metrics for fine-tuned StyleGAN and Stable Diffusion models - Facilitated adoption of observability tools and engineering practices through workshops on GPU programming and AI Agents for +50 students	

Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Built a cloud-native Storage Service handling high-volume data across S3 and Google Cloud Storage with high availability and fault tolerance via Python, PostgreSQL, and Redis - Developed highly scalable backend workflows using AWS Step Functions and Lambda, preventing timeouts and ensuring data consistency across distributed microservices - Implemented application metrics and logging for a RAG-based support chatbot, reducing ticket resolution time by 20% through efficient data collection and querying	

PROJECTS

Dark Factory - Orchestrator for AI coding CLIs <i>Crossterm, Ratatui, Y-crdt</i>	github.com/ozzyozbourne/dark-factory
Built a high-performance CLI orchestrator in Rust, utilizing PTY for command logging and Y-crdt for real-time synchronization across distributed machines in a Linux environment
