EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages & Full Stack: Python, Java, JavaScript/TypeScript, Rust, React, FastAPI, REST APIs

Data & Infrastructure: PostgreSQL, Redis, AWS, cloud infrastructure, GPU compute, Docker, Kubernetes, IaC, Cloud-Formation

Reliability & Delivery: CI/CD, GitHub Actions, testing, observability, OpenTelemetry, Temporal, distributed systems

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built core platform features end-to-end for a production CRM using **Python**, **FastAPI**, **PostgreSQL**, and **Redis**, routing customer requests across 40+ specialized agents with tenant-aware access control for 10,000+ users
- Owned **React** and **TypeScript** frontend interfaces plus backend services for a visual workflow platform, using **Temporal** for durable scheduling, retries, and resumable execution of customer-defined workflows
- Made **reliability a feature** through automated testing, OpenTelemetry trace-based evaluations, and GitHub Actions **CI/CD** quality gates that detect latency, correctness, accuracy, and safety regressions before deployment
- Built infrastructure and deployment tooling with **Docker** and **Kubernetes**, exposing 160+ validated backend actions through FastMCP with production monitoring and secure multi-customer controls
- Automated daily code-quality review with OpenAI Codex and a Bitbucket API integration across 25–30 PRs/week, reducing manual review effort by several hours while improving release discipline

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a data-intensive storage service in **Java** and Spring Boot with **PostgreSQL** and **Redis**, providing APIs for uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO through expiring signed URLs
- Shaped performance decisions by optimizing PostgreSQL window functions, materialized views, and indexes, reducing query latency and surfacing results in customer-facing **React** interfaces
- Orchestrated 100K+ weekly production jobs with AWS Step Functions and Lambda, adding retries and error recovery to improve reliability for long-running cloud workflows
- Contributed to **cloud infrastructure**, **IaC**, and deployment automation using AWS, CloudFormation, **Docker**, **Kubernetes**, and **CI/CD** across production services

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a **distributed systems** orchestrator that converts large requests into dependency-aware task DAGs and schedules execution across multi-machine workers with retries, timeouts, and failure isolation
- Paired backend orchestration with TypeScript operator interfaces for end-to-end visibility, control, and reliable execution across distributed workers
