EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages & Automation: Python, Bash, PowerShell, Java, JavaScript/TypeScript, SQL
Quality Engineering: Software quality assurance, test automation, debugging, root cause analysis, defect validation, regression testing
Platforms & Systems: Linux, Windows, Docker, Kubernetes, AWS, distributed systems, REST APIs
AI & Observability: OpenAI, Claude, LLMs, LangGraph, OpenTelemetry, LangSmith, Langfuse
Development: Git, GitHub Actions, CI/CD, FastAPI, Spring Boot, React, PostgreSQL, Redis

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Built Python-based automated test and diagnostic tooling for a multi-agent CRM platform serving 10,000+ users, using OpenTelemetry traces to reproduce failures, troubleshoot root causes, and validate fixes across 40+ specialized agents - Developed AI-driven tools with OpenAI Codex and a custom Bitbucket MCP server to analyze 25–30 pull requests/week, surface defects, and reduce manual troubleshooting and reviewer effort by several hours - Created GitHub Actions CI/CD quality gates that replayed production conversations and measured latency, tool-call accuracy, and safety, catching regressions before deployment and improving product reliability - Partnered with software engineers and users to debug customer-specific workflow failures across Linux, cloud services, FastAPI, React, Temporal, and Redis, then verified corrections through automated evaluations and live execution telemetry - Built Bash and Python-backed operational workflows plus 160+ validated backend actions with structured error handling, monitoring, and tenant-aware access control for faster issue isolation	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Developed and tested a cloud-agnostic storage service in Java and Spring Boot with PostgreSQL and Redis, validating file operations across Google Cloud Storage, Amazon S3, and MinIO through expiring signed URLs - Investigated performance defects through SQL profiling and root cause analysis, then optimized PostgreSQL window functions, materialized views, and indexes to reduce query latency and improve scalability - Validated long-running distributed jobs orchestrated with AWS Step Functions, improving failure recovery and reliability across 100K+ weekly executions	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Python, Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
Built and tested a distributed coding-agent orchestrator that executes dependency-aware task DAGs across multiple machines with retries, timeout handling, structured diagnostics, and failure recovery
