EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Java, Python, Rust, JavaScript/TypeScript, Html/Css
Databases & Storage: PostgreSQL, MongoDB, Redis
Cloud Services (AWS): EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway
Systems & Tools: Git, Linux, CI/CD, Docker, Kubernetes
Backend & Frameworks: Spring Boot, FastAPI, React, LangGraph, LangChain, FastMCP, LlamaIndex

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Designed and developed system software and internal engineering tools in Python, LangGraph and FastAPI, serving 10,000+ users by routing requests across 40+ specialized services with secure access control - Built CI/CD pipelines with GitHub Actions and Docker for automated deployments, running OpenTelemetry trace-based evals to troubleshoot, debug, and optimize software performance before production release - Engineered a FastMCP server exposing 160+ backend actions with built-in monitoring, writing clean, efficient, maintainable code that automated internal software workflows securely across multiple customers - Built LlamaIndex-powered RAG pipelines over large document datasets using OpenAI embeddings and Pgvector to process, analyze, and surface product insights as ready-to-run REST API examples - Added durable progress tracking for long-running Temporal workflows using Redis, enabling users to monitor live execution status and improving system reliability	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic Storage Service in Java and Spring Boot with PostgreSQL and Redis that handles file uploads, downloads, and deletions across S3, Google Cloud Storage, and MinIO via expiring signed URLs - Optimized database performance and scalability by tuning PostgreSQL with window functions, materialized views, and indexes, then exposed the data through interactive React dashboards and visualizations for business stakeholders - Built data pipelines orchestrating long-running jobs with AWS Step Functions, reducing AWS Lambda timeouts and improving error recovery and system-level reliability across 100K+ weekly executions	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
Built a distributed systems coding-agent orchestrator that decomposes large requests into dependency-aware task DAGs and executes them across multi-machine agents with retries and timeout handling
