EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, Java, Rust, Html/Css

Backend & Frameworks: React, FastAPI, LangGraph, LangChain, FastMCP, Spring Boot, LangSmith, Langfuse

Databases: PostgreSQL, Redis, MongoDB

Others: Git, CI/CD, Docker, Kubernetes, OpenAI Agents SDK, LlamaIndex, Google ADK, Claude Code

AWS Services: CloudWatch, RDS, Lambda, Step Functions, API Gateway, EC2, S3, CloudFormation, CloudFront

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Owned **full-stack product features** for a multi-agent **CRM** from inception to impact, using **TypeScript**, **React**, **Next.js**, **Node.js**, **Apollo GraphQL**, **Python**, **FastAPI**, and **PostgreSQL** to route requests across 40+ specialized **LLMs** for 10,000+ users
- Built a **React Flow** and **TypeScript** visual workflow platform for users to create, run, and manage agentic swarms, using **Temporal** for durable, resumable execution and scalable, performant product experiences
- Developed production **observability and metrics** with **OpenTelemetry**, **CloudWatch**, and trace-based evals in GitHub Actions **CI/CD**, proactively detecting latency, accuracy, and safety regressions before AI-agent deployments
- Created a secure **MCP** server with **FastMCP** exposing 160+ backend actions, enabling reliable CRM automation across customers through validated tool calls, access control, and built-in monitoring
- Built an **OpenAI Codex** and Bitbucket MCP code-review pipeline that triaged 25–30 PRs/week, reduced reviewer load by hours, and strengthened engineering practices through automated feedback and knowledge-sharing

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Built and maintained a cloud-agnostic Storage Service in **Java**, **Spring Boot**, **PostgreSQL**, and **Redis**, reliably handling uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs
- Improved **scalability and performance** by optimizing **PostgreSQL** with window functions, materialized views, and indexes, then surfaced actionable insights through interactive **React** visualizations for technical and non-technical stakeholders
- Orchestrated long-running jobs with **AWS Step Functions** and **Lambda**, improving error recovery and smooth operation while preventing timeouts across 100K+ weekly executions

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that decomposes ambiguous requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries, timeout handling, and proactive issue detection
- Designed reliable coordination and continuous-improvement loops for independently driven agents, surfacing execution state and failures so engineers can review technical decisions and deliver results quickly
