EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, Rust, Html/Css

Backend & Frameworks: Spring Boot, FastAPI, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse

Databases: PostgreSQL, Redis, MongoDB

AWS Services: S3, Lambda, Step Functions, EC2, RDS, CloudWatch, CloudFormation, CloudFront, API Gateway

Others: CI/CD, Docker, Kubernetes, Git, OpenAI Agents SDK, Google ADK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Sperse

Feb 2026 - Present

- Designed and developed **software applications** for a **Machine Learning** enabled CRM platform using **Python**, **LangGraph**, **LangChain**, and **FastAPI**, routing requests across 40+ specialized sub-agents with secure access control for 10,000+ users
- Created **tickets, stories, and epics** for a **React Flow** and **TypeScript** visual workflow platform, then built durable **Temporal** execution paths that let users create, run, and manage agentic swarms against business and user needs
- Conducted **peer code reviews** and built an agentic review pipeline integrating **OpenAI Codex** with a Bitbucket MCP server, improving **code quality**, consistency, and best practices across 25-30 PRs/week while reducing reviewer load by several hours
- Created a **MCP** server using **FastMCP** and wrote **technical documentation** for 160+ backend actions, helping AI agents automate CRM workflows securely across multiple customers with built-in monitoring
- Built **LlamaIndex**-powered **RAG** agents using OpenAI embeddings and **Pgvector** to answer product questions, generate ready-to-run **REST** API examples, and support software system design and maintenance decisions

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Designed and developed **Java** and **Spring Boot** storage **software applications** with **PostgreSQL** and **Redis**, handling uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs
- Applied **Analysis of Algorithms** reasoning to optimize **PostgreSQL** window functions, materialized views, and indexes, then delivered **Data Visualization** workflows in **React** so business stakeholders could inspect latency and scalability gains
- Consulted with customers and other departments on **project status**, proposals, and **software system design or maintenance** while orchestrating long-running jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts across **100K+** weekly executions

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator with **System Programming** discipline, decomposing large coding requests into dependency-aware task DAGs executed across multi-machine AI agents with retries and timeout handling
- Modeled scheduling and failure-recovery paths with **Analysis of Algorithms** tradeoffs (graph dependencies, critical paths, retry bounds), strengthening design, sprint planning, and retrospective conversations around technical issues
