EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: *TypeScript/Node.js*, *Python*, Java, JavaScript, Rust, HTML/CSS
AI & Agentic Systems: *Modern LLM APIs*, LangGraph, LangChain, OpenAI Agents SDK, FastMCP, LlamaIndex, RAG, prompt and model management
Full Stack & Data: React, React Flow, FastAPI, Spring Boot, REST APIs, *Postgres/PostgreSQL*, Pgvector, Redis
Infrastructure & Quality: data pipelines, evaluation harnesses, observability, OpenTelemetry, LangSmith, Langfuse, GitHub Actions, CI/CD, Docker, AWS

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Shipped AI-powered features for a multi-agent CRM using Python, LangGraph, LangChain, and FastAPI, routing requests through 40+ specialized agents with validated tool calls and tenant-aware access control for 10,000+ users - Owned complete features across the stack, building a TypeScript/Node.js and React Flow UI plus backend APIs for users to author, review, and manage agentic workflows with durable, resumable Temporal execution - Built an agentic code-review workflow integrating OpenAI Codex with a custom Bitbucket MCP server to analyze consistency and suggest changes across 25–30 PRs/week, saving reviewers several hours of manual triage - Developed evaluation harnesses, prompt and model management workflows, and observability with OpenTelemetry trace-based evals in GitHub Actions CI/CD, flagging latency, accuracy, and safety regressions before production - Created a FastMCP server exposing 160+ backend actions to AI agents and iterated on customer-facing workflows with secure access controls, monitoring, and live Redis progress tracking	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed distributed systems for a cloud-agnostic storage service in Java, Spring Boot, PostgreSQL, and Redis, providing validated APIs for uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO - Built data pipelines with PostgreSQL window functions, materialized views, and indexes, reducing query latency and exposing results through interactive React visualizations for business stakeholders - Orchestrated long-running workflows with AWS Step Functions and Lambda, improving error recovery and reliability across 100K+ weekly executions in managed cloud services	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built an agentic workflow orchestrator that explores implementation designs, simulates changes through dependency-aware task DAGs, and validates outputs across distributed AI agents with retries and timeout handling - Implemented full-stack orchestration patterns for evolving complex systems, combining autonomous planning, multi-machine execution, state management, and pragmatic failure recovery
