EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Python, Go, JavaScript/TypeScript, Java, Rust, Html/Css

ML & Infrastructure: PyTorch, Kubernetes, Docker, CI/CD, vLLM, Git, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway

Backend & Frameworks: FastAPI, Spring Boot, LangGraph, LangChain, FastMCP, LangSmith, Langfuse, React

Databases: PostgreSQL, MongoDB, Redis

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built **LLM CI/CD** pipelines with GitHub Actions running **OpenTelemetry** trace-based evals as frameworks and safeguards to ensure best-in-class model quality, flagging latency, accuracy and safety regressions during code reviews and continuous deployment
- Built scalable backend infrastructure for a **multi-agent** CRM platform in **Python** and **Go** with **FastAPI** on the **AWS** cloud, serving 10,000+ users by routing inference requests across 40+ specialized sub-agents with secure access control
- Created a **FastMCP** control-plane server exposing 160+ backend actions to LLMs, powering model-serving and CRM automation across multiple tenants with built-in monitoring, observability, and reliability safeguards
- Built **LlamaIndex**-powered **RAG** data pipelines using OpenAI embeddings and **Pgvector**, containerized with **Docker** and **Kubernetes** for scalable, cost-efficient deployment and inference
- Added live progress tracking for long-running distributed **Temporal** workflows using **Redis**, improving reliability and enabling production debugging via logs, metrics and monitoring across compute and storage layers

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** handling distributed file uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs
- Orchestrated long-running distributed jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts and improving reliability and error recovery across **100K+** weekly executions
- Reduced query latency and improved cost efficiency by optimizing **PostgreSQL** with window functions, materialized views, and indexes across compute and storage layers, exposing results via interactive **React** visualizations

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that breaks large requests into dependency-aware task DAGs and schedules them across multi-machine AI agents with retries, timeout handling, and fault-tolerant distributed execution
