EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Python, JavaScript, Node.js, Java, TypeScript, SQL, Bash

Databases: PostgreSQL, Couchbase, Cassandra, Yugabyte, Redis, Pgvector; queries, performance tuning, replication, backup, recovery, availability

Backend & Cloud: FastAPI, REST APIs, AWS (S3, RDS, Lambda, Step Functions, CloudWatch), Google Cloud, Google Cloud Storage

Engineering: Linux, command-line tools, Git, CI/CD, Docker, Kubernetes, Agile, debugging, testing, troubleshooting, database migrations, automation scripts

Concepts: database administration, data integrity, distributed database architectures, cloud computing, AI/ML

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Developed and enhanced **Python** / **FastAPI** backend services for a multi-agent CRM serving 10,000+ users, translating application requirements into secure database-backed functionality across 40+ specialized agents
- Built and supported application features with **JavaScript**, **TypeScript**, and React Flow, pairing durable Temporal services with **PostgreSQL** and **Redis** state to improve application reliability and live workflow visibility
- Automated development and operational processes through **Python** scripts, GitHub Actions **CI/CD**, and OpenTelemetry trace-based tests, accelerating troubleshooting and identifying root causes across 25–30 pull requests per week
- Implemented **PostgreSQL** / **Pgvector** data retrieval for LlamaIndex RAG services, writing and reviewing SQL queries, validating data integrity, and monitoring latency and tool-call accuracy before production deployments
- Operated containerized services in **Linux** and cloud-based environments using Docker, Kubernetes, command-line tools, and AWS observability patterns, collaborating with engineering teams on configuration and reliable fixes

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Developed a cloud-agnostic backend in **Java**, Spring Boot, **PostgreSQL**, and Redis supporting uploads, downloads, and recovery workflows across **AWS S3**, **Google Cloud Storage**, and MinIO through expiring signed URLs
- Optimized database queries with window functions, materialized views, and indexes, monitoring **PostgreSQL** performance to reduce query latency and improve scalability for interactive JavaScript/React reporting
- Supported database operations including configuration, maintenance, migrations, upgrades, integrations, **backup**, **recovery**, replication, availability, and data integrity across development and production environments
- Troubleshoot application, database, and system issues in **Linux** environments and orchestrated reliable fixes with AWS Step Functions and Lambda, improving error recovery across 100K+ weekly executions

PROJECTS

Distributed Database Operations Lab | *Python, Node.js, PostgreSQL, Couchbase, Cassandra, Yugabyte* github.com/ozzyozbourne

- Developed automation scripts to exercise queries, schema migrations, backups, recovery, replication, and performance monitoring across **PostgreSQL**, **Couchbase**, **Cassandra**, and **Yugabyte**, comparing distributed database architectures and availability tradeoffs
- Built a **Node.js** and Python troubleshooting interface for database health checks, query diagnostics, and cloud deployment workflows across **AWS** and **Google Cloud**, applying Agile development, debugging, and testing practices
