Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Software Engineer** position with **Datagate**. I bring over three years of professional experience in developing scalable backend systems, middleware solutions, and cloud-native integrations, along with a strong academic foundation as a Master of Science in Computer Science graduate from Pace University.

Through my experience across multiple engineering roles, I have built and delivered production-grade backend systems that directly reflect **the complex middleware and enterprise integration challenges this position demands**. As a Software Engineer at Sperse, I engineered a middleware interaction layer that translates intents into safe, validated API calls across 1,000+ platform endpoints—requiring rigorous contract design, input validation, and reliable execution across distributed microservices. To ensure operational stability, I implemented a robust observability layer using CloudWatch and LangSmith, reducing end-to-end latency by 60% and infrastructure overhead by 50% through targeted concurrency and routing optimizations. Prior to Sperse, as a Software Engineer at Qualitest, I contributed to the backbone infrastructure that thousands of enterprise users rely on daily. I designed and implemented a cloud-agnostic integration service using Python and Redis that seamlessly handled file operations across AWS S3, Google Cloud, and MinIO via signed URLs—giving me direct, hands-on experience with the kind of multi-environment backend design central to Datagate’s consulting work. I also contributed to an Identity & Access Management platform built with Java, Spring Boot, and AWS, and developed robust backend workflows using AWS Step Functions to manage long-running data import jobs. These experiences have prepared me to **contribute meaningfully to Datagate’s mission of bridging legacy systems with modern cloud-native applications** and drive impact within an agile, family-like engineering team.

My academic research and presentation experience have given me a rigorous foundation in architectural design and technical communication—skills that translate directly into **the technical professionalism and agile, family-like culture your team values**. As an AI Researcher at the Pace Artificial Intelligence Lab, I leveraged CUDA and PyTorch on an HPC cluster to develop complex generative models, presenting technical ideas and high-level architectural concepts to internal research teams and stakeholders. Beyond the engineering itself, I led technical workshops for 50+ students on GPU programming and agentic architecture. Designing and delivering those sessions required breaking down complex technical concepts for diverse audiences—directly mirroring **the technical presentation and stakeholder communication skills central to this consulting-oriented role**. This experience has shaped me into an engineer who builds with rigor and communicates with clarity, both of which I would bring to **Datagate and its mission to automate and standardize complex IT landscapes**.

I have always been passionate about **Results-driven consulting and the seamless integration of legacy systems with modern cloud-native technology** and envision myself contributing my talent to the furthering of **Datagate’s mission to bridge the gap between legacy proprietary systems and modern digital transformation**. I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, I look forward to connecting!

Sincerely,
Osaid Khan
