Dear Hiring Team,

I am excited to apply for the Software Engineer - New Grad role at Nexthop AI. I bring more than three years of professional software-engineering experience and an MS in Computer Science with a 4.0 GPA. Nexthop AI's work building efficient AI infrastructure and innovative networking products for Hyperscalers and NeoClouds is a compelling match for my experience designing distributed systems, optimizing core services, and taking software solutions from implementation through testing and production support.

At Sperse, I designed and implemented a Python and FastAPI distributed CRM platform serving more than 10,000 users and routing requests across 40+ specialized agents. I built durable execution with Temporal, Redis, and Docker, adding retries, production monitoring, and live progress visibility for long-running workflows. I also owned quality across the development lifecycle: an OpenAI Codex and Bitbucket pipeline now helps triage 25–30 pull requests per week, while GitHub Actions CI/CD gates production deployments. This combination of system design, implementation, testing, and peer review would let me contribute immediately as Nexthop engineers build and optimize core systems.

The role's customer involvement also reflects how I work. At Sperse, I supported project scoping, proof-of-concept workflows, early trials, and production/escalation support while exposing 160+ validated backend actions through a FastMCP server with observability. Earlier, at Qualitest, I engineered a cloud-agnostic service with PostgreSQL and Redis for Google Cloud Storage, S3, and MinIO, then improved operational reliability across 100K+ weekly executions with AWS Step Functions and Lambda. Those projects required clear communication, collaborative problem-solving, quick learning, and the confidence to ask questions while taking ownership of delivery.

I am especially drawn to Nexthop AI's collaborative, creative startup culture and its model of working as an extension of cloud companies' engineering teams. Building reliable, efficient infrastructure through deep customer partnerships is exactly the kind of mission-critical systems work I want to pursue. I would welcome the opportunity to bring my Python, distributed systems, Docker, SQL/NoSQL, testing, and production-support experience to Nexthop AI. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your consideration; I look forward to connecting.

Sincerely,
Osaid Khan
