EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, SQL

Systems Software: Distributed systems, embedded systems concepts, REST APIs, multi-agent orchestration, concurrency, fault tolerance

Containers & Data: Docker, Kubernetes, PostgreSQL, MongoDB, Redis, Pgvector, S3, Google Cloud Storage, MinIO

Engineering: Git, CI/CD, peer review, testing, system design, production support, FastAPI, Spring Boot, React

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Designed and implemented a **Python** and **FastAPI** distributed CRM platform serving 10,000+ users, routing requests across 40+ specialized agents with tenant-aware access control, retries, and production monitoring
- Built and optimized core systems for durable execution using **Temporal**, **Redis**, and **Docker**, giving customers live progress visibility and reliable recovery for long-running workflows
- Owned software solutions from design and implementation through **testing** and **peer review**, integrating OpenAI Codex with Bitbucket to triage 25–30 PRs/week and GitHub Actions CI/CD to gate production deployments
- Supported customers through project scoping, proof-of-concept workflows, early trials, and production/escalation support, exposing 160+ validated backend actions through a **FastMCP** server with built-in observability
- Developed **LlamaIndex** retrieval systems with OpenAI embeddings and **Pgvector**, translating product questions into grounded answers and ready-to-run REST API examples for customer development workflows

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Engineered a cloud-agnostic systems service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, supporting uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO through expiring signed URLs
- Optimized **SQL** queries with window functions, materialized views, and indexes, improving database latency and scalability while delivering interactive React visualizations to business stakeholders
- Orchestrated fault-tolerant distributed jobs with **AWS Step Functions** and Lambda, improving timeout recovery and operational reliability across 100K+ weekly executions
- Collaborated with engineers and stakeholders on system design, implementation, testing, and production support, turning storage and reporting requirements into maintainable software solutions

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript, Distributed Systems* | github.com/ozzyozbourne/dark-factory

- Built a **distributed systems** orchestrator that converts large software-engineering requests into dependency-aware task DAGs and executes them across multiple machines with concurrency, retries, and timeout handling
- Implemented ownership boundaries and failure recovery for collaborating coding agents, enabling independently testable work units and reliable end-to-end execution
- Developed the **Elixir** and **TypeScript** control plane around explicit task dependencies and machine-level execution boundaries, supporting quick iteration on core orchestration behavior
