Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Software Developer** role with **CAI**. I bring over three years of professional experience in full-stack web applications, backend system design, and AI integration, along with a strong academic foundation as a Master of Science in Computer Science graduate from Pace University, NY.

Through my experience across two engineering roles, I have built and delivered production-grade backend systems that directly reflect **expertise in Java, Spring Boot, SQL, and the development of scalable applications and Web APIs**. As a Software Engineer at Sperse, I architected a concurrent multi-agent system using LangChain and LangGraph that translates natural-language intents into validated **Web API** calls across 1,000+ platform endpoints — requiring rigorous design, input validation, and safe execution across distributed workflows. To ensure system stability and performance, I built generative code solutions (API-aware templates and SDK patterns) and implemented an observability layer using Langfuse and LangSmith for tracing and structured logs. Prior to Sperse, as a Software Engineer at Qualitest, I contributed to the backbone infrastructure that thousands of users rely on daily. I designed and developed a cloud-agnostic Storage Service using **Python, PostgreSQL (SQL)**, and **Redis** for efficient data processing across AWS S3 and Google Cloud Storage. I also contributed to an Identity & Access Management platform built with **Java, Spring Boot**, and **MVC** patterns, supporting thousands of users across 30+ applications, and developed backend workflows using **AWS Step Functions** and **PowerShell** to automate data import jobs and maintain source materials in **GitHub** — both of which required **systems-level thinking and operational stability focus**. Together, these roles have prepared me to **assist in designing and developing customized solutions, supporting client needs, and ensuring system performance** and drive impact within an agile engineering team at CAI.

My academic research experience has given me a rigorous foundation in model development, GPU-accelerated computing, and technical communication — skills that translate directly into **values of collaboration and taking ownership to deliver impactful technology solutions**. As an AI Researcher at the Pace Artificial Intelligence Lab, I conducted research on StyleGAN and Stable Diffusion using CUDA and PyTorch on an HPC cluster. Beyond building the systems myself, I led workshops and **systems training** on building AI Agents for an audience of 50+ students. Designing and delivering those sessions required me to break down complex technical concepts clearly and accessibly — directly mirroring **the role of conducting systems training and workshops to empower both staff and clients**. This experience has shaped me into an engineer who builds with rigor and communicates with clarity, both of which I would bring to **CAI and its mission to empower individuals and organizations through technology**.

I have always been passionate about **uniting talent and technology to power the possible for communities** and envision myself contributing my talent to the furthering of **creating a future where every person can live at the peak of possible through inclusive and innovative solutions**. I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, I look forward to connecting!

Sincerely,
Osaid Khan
