Dear Hiring Team,

I am writing to apply for the **Software Engineer** role with **PowerSchool**. I bring more than three years of experience building backend systems, AI-driven workflows, and data-heavy services, along with a Master of Science in Computer Science from Pace University. The mix of **AWS serverless**, **Python**, **TypeScript**, **SQL**, and production debugging in this role closely matches the systems I have been building.

At Sperse, I built a **multi-tenant** CRM orchestration layer in **Python** and **FastAPI** that routes requests across 40+ specialized sub-agents with tenant-aware access control, production monitoring, and secure tool execution for 10,000+ users. I also built a **TypeScript** and **React Flow** workflow builder for durable, resumable automations using **Temporal**, an agentic code review pipeline that integrates **OpenAI Codex** with a custom **Bitbucket MCP** server, and a **FastMCP** server exposing 160+ backend actions with **Pydantic** validation and **OpenTelemetry** instrumentation. At Qualitest, I designed a cloud-agnostic Storage Service with **Java**, **Spring Boot**, **PostgreSQL**, and **Redis**, optimized **SQL** and PostgreSQL query paths for reporting-style access, and orchestrated long-running jobs with **AWS Step Functions** and **AWS Lambda** across 100K+ weekly executions. That combination of cloud-native backend work, AI-assisted automation, and operational rigor is the experience I would bring to PowerSchool's reporting and data platform work.

PowerSchool's mission to empower educators, administrators, and families to help students learn in a way that is right for them aligns with how I think about engineering. I am especially drawn to the emphasis on **support every step**, **make personalization possible**, and **work together** through data. I would welcome the opportunity to contribute to the technical depth, collaboration, and engineering discipline this team values, and to help build systems that make student-facing experiences more reliable and more personalized.

I would be glad to discuss how my background maps to your team's priorities. You can reach me at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
