EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

AWS Services: Lambda, Step Functions, API Gateway, CloudWatch, CloudFormation, CloudFront, EC2, RDS, S3

Languages: Python, JavaScript/TypeScript, Java, Rust, Html/Css

Backend & Frameworks: FastAPI, LangGraph, LangChain, FastMCP, LangSmith, Langfuse, React, Spring Boot

Databases: PostgreSQL, Redis, MongoDB

Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built a **multi-tenant** CRM orchestration layer in **Python** and **FastAPI**, routing requests across 40+ specialized sub-agents with tenant-aware access control, production monitoring, and secure tool execution for 10,000+ users
- Built a **TypeScript** and **React Flow** workflow builder for durable, resumable automations, using **Temporal** to coordinate long-running, event-driven execution and surface live state in the dashboard
- Built an agentic **code reviews** pipeline integrating **OpenAI Codex** with a custom **Bitbucket MCP** server, automating daily PR triage across 25-30 PRs/week and reducing manual reviewer load by several hours
- Created a **FastMCP** server exposing 160+ backend actions to AI agents, using **Pydantic** validation, **testing** guardrails, and **OpenTelemetry** instrumentation to keep tool calls safe, auditable, and easy to debug
- Wired **GitHub Actions CI/CD** to trace-based evals, replaying production conversations to validate latency, tool-call accuracy, and safety before each deploy, supporting release **performance optimization**

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a **cloud-native**, cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** that handled file uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs
- Optimized **SQL** and **PostgreSQL** query paths for **data access and reporting workloads** with window functions, materialized views, and indexes to cut latency and improve **performance optimization**, then exposed the data through interactive **React** visualizations for business stakeholders
- Orchestrated long-running jobs with **AWS Step Functions** and **AWS Lambda**, reducing timeouts and improving error recovery across **100K+** weekly executions

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that breaks large requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling
- Added orchestration controls for durable, observable execution, keeping parallel agent runs resilient under changing repo context and long-running workloads
