Dear Google Hiring Team,

I am applying for the **Software Engineer, Early Career, Campus** position. I bring more than three years of professional software engineering experience, a recently completed Master of Science in Computer Science from Pace University, and production experience spanning Python, Java, JavaScript/TypeScript, distributed systems, web applications, machine learning, natural language processing, and AI productivity tools. Google's mission to organize the world's information and make it universally accessible and useful strongly aligns with the information-retrieval and developer-productivity systems I have built.

At Sperse, I designed, developed, tested, deployed, and maintained a distributed Python and FastAPI platform that routes requests across more than 40 services for over 10,000 users. I also built a customer-facing TypeScript and React Flow application, owning features from ambiguous requirements through design, implementation, testing, deployment, and production improvement. To make complex backend capabilities usable and secure, I developed a production MCP service exposing 160+ validated actions with structured APIs, tenant-aware access control, monitoring, and fault isolation.

I have applied AI productivity tools to streamline real engineering workflows. By integrating OpenAI Codex with Bitbucket, I automated 25–30 pull-request reviews per week and saved engineers several hours. I also built LlamaIndex information-retrieval services over PostgreSQL/Pgvector and created GitHub Actions and OpenTelemetry evaluation pipelines that catch latency, accuracy, and safety regressions before release. Earlier at Qualitest, I developed Java and Spring Boot services, optimized PostgreSQL performance, and improved error recovery across more than 100,000 weekly AWS Step Functions executions.

I would welcome the opportunity to bring my foundations in data structures, algorithms, software development, Unix/Linux, distributed systems, information retrieval, and web applications to Google and contribute across the full software lifecycle. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
