EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Databases: PostgreSQL, MongoDB, Redis
Languages: Java, JavaScript/TypeScript, Python, Rust, Html/Css
Backend & Frameworks: FastAPI, Spring Boot, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse
AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway
Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Built a multi-agent CRM platform with Python, LangGraph, LangChain, and FastAPI, routing requests across 40+ sub-agents with tenant-aware access control, requirements analysis, application design, and support documentation for faster handoff - Built a React Flow and TypeScript workflow editor for creating and managing agent swarms, using Temporal for durable execution, resumability, and clear state tracking across long-running customer workflows - Created a FastMCP server exposing 160+ backend actions, then added validation, monitoring, and architecture diagrams, design diagrams, and data flow diagrams to make integrations easier to troubleshoot and maintain across multiple customers - Built GitHub Actions CI/CD release gates and trace-based evals to standardize unit testing, catch latency and safety regressions before production, and reduce manual reviewer load across 25-30 PRs/week - Added Redis progress tracking for long-running Temporal workflows and incident-friendly dashboards, giving the team better visibility for tier 1 and 2 technical support and day-to-day issue resolution	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic Storage Service in Java and Spring Boot with PostgreSQL and Redis that handled uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO via expiring signed URLs, supporting controlled releases and Change Management disciplines - Reduced query latency by optimizing PostgreSQL with window functions, materialized views, indexes, and SQL query patterns, then exposed the data through interactive React visualizations for internal customers and business stakeholders - Orchestrated long-running jobs with AWS Step Functions, reducing AWS Lambda timeouts and improving error recovery across 100K+ weekly executions while strengthening SDLC reliability and operational runbooks - Partnered with stakeholders to translate requirements into maintainable data models and support-ready notes, helping the team troubleshoot daily issues and keep production changes predictable	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed coding-agent orchestrator that breaks large requests into dependency-aware task DAGs and executes them across multi-machine agents with retries and timeout handling - Added explicit dependency resolution and lifecycle tracking so long-running jobs stay observable, recoverable, and easy to reason about during repeated runs
