EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, SQL, Rust, HTML/CSS
Backend & Frameworks: Spring Boot, FastAPI, React, REST APIs, LangGraph, LangChain, FastMCP
Databases: PostgreSQL, MongoDB, Redis, Pgvector
AWS Services: S3, Lambda, Step Functions, CloudWatch, EC2, RDS, API Gateway, CloudFormation
Others: Git, CI/CD, automated testing, Docker, Kubernetes, OpenTelemetry, Claude Code, Codex CLI

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Investigated agent workflow failures through OpenTelemetry traces, application behavior, and Redis state, then added live progress tracking so customers could monitor and recover long-running executions - Built a secure Python/FastAPI multi-agent CRM platform serving 10,000+ users, routing requests across 40+ specialized agents and 160+ backend actions with controlled customer access - Automated daily code-review triage with AI agents, OpenAI Codex, and a custom Bitbucket MCP server, reducing manual review across 25-30 pull requests per week by several hours - Used Claude Code and Codex CLI to automate deployment pipelines, error monitoring, and automated testing, validating results with OpenTelemetry trace-based evaluations before production releases - Built durable React Flow/TypeScript workflows with Temporal retries and resumable execution, helping users create, run, and manage agent swarms through production interruptions - Built LlamaIndex RAG agents with OpenAI embeddings, Pgvector, and REST API examples, helping users resolve product questions with ready-to-run technical guidance	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Built a cloud-agnostic Storage Service in Java/Spring Boot with PostgreSQL and Redis, exposing secure APIs for file operations across S3, Google Cloud Storage, and MinIO - Diagnosed slow data paths and optimized SQL with indexes, window functions, and materialized views, reducing query latency and improving scalability for stakeholder-facing React dashboards - Orchestrated long-running jobs with AWS Step Functions, reducing Lambda timeouts and improving error recovery across 100K+ weekly executions - Used AI agents to automate repetitive development tasks for storage and job-orchestration workflows, then reviewed their output before integrating changes	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
Built a distributed coding-agent orchestrator that decomposes requests into dependency-aware task DAGs and runs them across multiple machines with retries, timeout handling, and failure recovery
