Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Software Developer** role with **Akkodis**. I bring over three years of software engineering experience across cloud platforms, full-stack development, protocol-driven integration, and test automation, backed by a Master of Science in Computer Science from Pace University.

In my recent Software Engineer role at Sperse, I developed **Google cloud-based software applications** with **Java**, **JavaScript/TypeScript**, **React JavaScript libraries**, and an **Angular JavaScript framework** approach, enabling safe automation across **1000+ platform endpoints**. I also applied **Software Design Methods and Implementation** with **Java Patterns** (Core Java **multithreading** and **multitasking**), while delivering **unit and integration test software**, **automatic build and test scripts**, and customer-ready **software documentation**. These efforts required consistent **Cross-Team / Customer Interaction** through **Daily Stand-ups**, **Sprint Planning Meetings**, and **Sprint Review Meetings**, directly aligning with your core engineering responsibilities.

At Qualitest, I designed, coded, and tested **vehicle communication modules** using **CAN** and **14229 Protocols**, and worked across **30+** applications to support **integration of HMI components with other core framework components**. I paired this with release automation and **code coverage** focused testing workflows, including **unit and integration test software** and CI execution gates. I also delivered a **LangChain + RAG** assistant on **PostgreSQL** vector search that reduced ticket resolution time by **20%**, reinforcing disciplined implementation and measurable delivery outcomes.

I am especially motivated by Akkodis' mission of **Engineering a Smarter Future Together** and its focus on creating **meaningful, measurable impact** through innovation and agility. I value the belief that technology should unlock human potential, and I am excited to contribute that mindset to Akkodis' automotive engineering programs in the Detroit Metro area.

I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, I look forward to connecting!

Sincerely,
Osaid Khan
