Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the Forward Deployed Engineer role with Stack Exchange. I bring over three years of customer-facing engineering experience across backend systems, AI workflows, and production delivery, supported by an MS in Computer Science from Pace University.

At Sperse, I owned technical delivery for Professional Services engagements across deployments from prototype to stable production for enterprise customers. I contributed to SOW development by documenting technical specifications, dependencies and risks, and acceptance criteria, then built and validated integrations using API, MCP server, and Knowledge Ingestion Engine patterns that connected customer knowledge sources to AI-powered developer workflows. I also wrote Python automation for deployment processes, data ingestion pipelines, Docker environments, and CI/CD pipelines with reusable playbooks and runbooks, reducing latency by 60% and API cost by 50%.

My prior work directly supports the role's integration and execution requirements. At Qualitest, I built a LangChain + RAG support chatbot with data ingestion and ETL patterns that reduced ticket resolution time by 20%, and delivered API-based and webhook-driven storage integrations across AWS and GCP using Python, PostgreSQL, and Redis. I also supported IAM delivery for 30+ applications with AWS Step Functions and CloudFormation. As an AI Researcher, I configured and validated enterprise AI deployment patterns with StyleGAN, Stable Diffusion, CUDA, and PyTorch, then documented runbooks and mentored 50+ students on AI agent workflows (LangChain, LangGraph, LangSmith), strengthening communication with technical and business stakeholders.

I am especially motivated by Stack Exchange's mission to be the world's most vital source for technologists and by its focus on cultivating community, powering learning, and unlocking growth through solid, verifiable knowledge. I would value the opportunity to contribute these strengths to Stack Exchange and help scale repeatable, high-quality customer deployments.

I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, and I look forward to connecting.

Sincerely,
Osaid Khan
