EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY Jan 2024 - Dec 2025
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Java, JavaScript/TypeScript, Python, Go
Backend & Frameworks: FastAPI, Spring Boot, react
AI/Agents: LangGraph, LangChain, FastMCP, LangSmith, Langfuse, LlamaIndex, Claude Code, Codex
Databases: PostgreSQL, MongoDB, Redis
AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway
Others: Git, CI/CD, Docker, Kubernetes

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ Feb 2026 - present
- Designed a multi-agent CRM system using LangGraph, LangChain, LangFuse and FastAPI, with a main orchestrator routing requests to 40+ specialized sub-agents - Refactored 500+ backend operations into typed tool-group dispatchers, replacing 60+ per-agent REST tools with structured interfaces - Built a dynamic tool-routing layer that exposes only task-relevant tool groups, reducing context bloat and improving tool selection accuracy by 90% - Implemented lazy-loaded sub-agent skills to reduce startup overhead and dynamically initialize agents per request with tenant-aware access control by propagating JWT, tenant, and role context through every agent and backend call. - Built trace-driven eval suites replaying production conversations across prompts and model versions, with real-time monitors to flag unsafe agent behavior before release. - Added two-stage input safety using jailbreak regex checks and Lakera Guard, with SQLite checkpointing for multi-turn state. - Built LlamaIndex powered RAG agents that guide users through CRM workflows and generate ready-to-run API examples - Built a workflow generation agent that turns user-provided Markdown docs into ready-to-run CRM workflow code, reducing onboarding time by 50%	

AI Researcher Pace Artificial Intelligence Lab	New York City, NY Sep 2025 - Dec 2025
- Built an agent-evaluation pipeline that ensembles LLM judges and reward models to rank multi-step tool-use runs - Implemented a LangGraph eval pipeline that scored agent runs, selected high-performing traces, and used them to tune prompts, increasing tool-call success by 50%	

Software Engineer Qualitest	Noida, India Feb 2021 - Dec 2023
- Built end-to-end CI/CD pipelines with GitHub Actions, reducing manual deployment steps and improving developer velocity - Optimized PostgreSQL queries using window functions, materialized views and indexes to minimize latency and improve scalability - Designed and optimized interactive data visualizations with D3.js, streamlining complex data interpretation for business stakeholders - Orchestrated long-running jobs with AWS Step Functions, reducing AWS Lambda timeouts and improving error recovery across 100K+ weekly executions	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
Turns a single user goal into a dependency-aware task plan that is automatically dispatched to a fleet of AI coding agents running across multiple machines, with built-in retries and timeout handling
