EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Java, JavaScript/TypeScript, Python, Go

Backend & Frameworks: FastAPI, Spring Boot, React

AI/Agents: LangGraph, LangChain, FastMCP, LangSmith, Langfuse, LlamaIndex, Claude Code, Codex

Databases: PostgreSQL, MongoDB, Redis

AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway

Others: Git, CI/CD, Docker, Kubernetes

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Sperse

Feb 2026 - Present

- Designed a multi-agent **CRM** system using **LangGraph**, **LangChain**, **LangFuse** and **FastAPI**, with a main orchestrator routing requests to 40+ specialized **sub-agents**
- Built retrieval-augmented generation (RAG) agents for CRM workflow support by ingesting technical documentation, chunking content for retrieval, and indexing OpenAI embeddings in pgvector to answer product questions and generate ready-to-run API examples
- Engineered a production MCP server (FastMCP 2.0, Python) exposing 160+ LLM-callable tools over a multi-tenant .NET backend TDD-built with Claude Code, Pydantic validation and OpenTelemetry instrumentation.
- Implemented lazy-loaded sub-agent skills to reduce startup overhead and dynamically initialize agents per request with tenant-aware access control by propagating JWT, tenant, and role context through every agent and backend call.
- Built **OpenTelemetry** trace-driven eval suites that replay production conversations across prompts and model versions, scoring latency and tool-call accuracy and flagging unsafe behavior.
- Built durable, user-defined agentic workflows with **React Flow** and **Inngest**, plus a fleet-management layer with **Slack** and **Teams** integration giving users a unified view and real-time observability across all running agent swarms.
- Built **LlamaIndex** powered **RAG** agents that guide users through CRM workflows and generate ready-to-run API examples
- Built end-to-end **CI/CD** pipelines with **GitHub Actions**, reducing manual deployment steps and improving developer velocity

AI Researcher

New York City, NY

Pace Artificial Intelligence Lab

Sep 2025 - Dec 2025

- Built an agent-evaluation pipeline that ensembles **LLM judges** and reward models to rank multi-step tool-use runs
- Implemented a **LangGraph** eval pipeline that scored agent runs, selected high-performing traces, and used them to tune prompts, increasing tool-call success by 50%

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Designed a cloud-agnostic Storage Service in **Python** with **PostgreSQL** and **Redis** that handles file uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs.
- Reduced query latency and improved scalability by optimizing **PostgreSQL** with window functions, materialized views, and indexes, then exposed the data via interactive **React.js** visualizations for business stakeholders.
- Orchestrated long-running jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts and improving error recovery across **100K+** weekly executions

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling
