EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Java, JavaScript/TypeScript, Python, Rust, Html/Css

Backend & Frameworks: Spring Boot, FastAPI, LangGraph, LangChain, FastMCP, React, LangSmith, Langfuse

Databases: PostgreSQL, MongoDB, Redis

AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway

Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built a **multi-tiered, distributed** multi-agent CRM platform using **Python, LangGraph, LangChain**, and **FastAPI**, serving 10,000+ users by routing requests across 40+ specialized **Object-Oriented** sub-agents with tenant-aware access control and lazy-loaded tool context
- Engineered a **scalable, fault-tolerant MCP** server using **FastMCP** exposing 160+ **AI-powered** tool actions over a **multi-threaded** multi-tenant backend with built-in **OpenTelemetry** monitoring, automating **multi-channel** CRM workflow execution across customers
- Built **GitHub Actions CI/CD** pipelines for AI-agent deployments within an **agile** delivery cycle, with **OpenTelemetry** trace-based evals gating every release on latency, accuracy, and safety — enforcing full **software development life cycle** discipline from **code reviews**, **source control management**, and **build processes** through automated **testing**
- Built **LlamaIndex**-powered **RAG** agents using **OpenAI** embeddings and **Pgvector** to answer product questions and deliver ready-to-run **REST** API examples — integrating **AI-powered capabilities** with a **customer-obsessed** focus on both technical and non-technical user experience

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a cloud-agnostic **distributed storage, index, and query** system in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, handling file operations across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs — **scalable, fault-tolerant**, and low-cost to operate at scale
- Orchestrated long-running jobs with **AWS Step Functions**, eliminating **AWS Lambda** timeouts and improving **fault-tolerant** error recovery across **100K+** weekly executions through structured retry and dead-letter policies
- Boosted **distributed** query performance by optimizing **PostgreSQL** with window functions, materialized views, and indexes (exposed via interactive **React** visualizations for business stakeholders), cutting reporting latency and improving data-driven decision-making

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a **distributed** coding-agent orchestrator that decomposes large coding requests into dependency-aware task DAGs, executing them across **multi-machine** AI agents with **fault-tolerant** retry and timeout-handling policies
- Designed the **multi-threaded** task-dispatch and scheduling layer using **Elixir** OTP abstractions, enabling parallel workload execution across **distributed** compute nodes with dynamic agent allocation and structured failure recovery
