Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Systems Engineer** role with **RADAR**. I bring over three years of professional experience in integrated software systems, end-to-end feature ownership, and data-driven problem solving, along with a strong academic foundation as a Master of Science in Computer Science graduate from Pace University, NY.

Through my experience across two engineering roles, I have built and delivered production-grade systems that directly reflect **the end-to-end ownership and cross-functional integration this position demands**. As a Software Engineer at Sperse, I took full ownership of an MCP AI interaction layer, defining rigorous **system requirements** and **acceptance criteria** to translate natural-language intents into validated tool calls across 1,000+ platform endpoints. To ensure high-quality delivery, I executed deep **data analysis in Python** to triage interaction failures and optimize performance, reducing end-to-end latency by 60% through targeted KV-cache hit rate improvements. Prior to Sperse, as a Software Engineer at Qualitest, I contributed to the backbone infrastructure that thousands of users rely on daily. I designed and developed a cloud-agnostic Storage Service using **Python, PostgreSQL, and Redis**, defining testable feature requirements for complex file operations across AWS S3 and Google Cloud Storage. I also performed **problem definition and root-cause analysis** on production data to **triage** failures in long-running data import jobs, implementing AWS Step Functions to resolve operational bottlenecks—experience that has prepared me to **lead feature ideation through release while ensuring high quality across hardware and software components**.

My academic research experience has given me a rigorous foundation in characterizing performance for integrated systems—skills that translate directly into **the mission-driven approach and focus on empathy-driven design your team values**. As an AI Researcher at the Pace Artificial Intelligence Lab, I conducted research on **integrated hardware and software systems** leveraging StyleGAN and Stable Diffusion on a high-performance HPC cluster. I was responsible for the full **triage and debug** of large-scale training runs, utilizing **Python** for model characterization and data synthesis to optimize fine-tuning workflows. Beyond technical execution, I led workshops for 50+ students, requiring me to translate complex technical concepts into actionable knowledge—directly mirroring **the cross-functional leadership and stakeholder alignment required for successful feature delivery** at RADAR. This experience has shaped me into an engineer who thrives in ambiguity and builds with digital precision, both of which I would bring to **RADAR and its mission to redefine in-store experiences**.

I have always been passionate about **reshaping the physical world with digital precision and driving high-impact collaboration** and envision myself contributing my talent to the furthering of **transforming the physical retail experience through real-time inventory tracking and automation**. I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, I look forward to connecting!

Sincerely,
Osaid Khan
