Hiring Team
CVS Health

Dear Hiring Team,

I am applying for the Associate Software Development Engineer role at CVS Health. My background building scalable Java, Python, and TypeScript services aligns directly with your work modernizing healthcare billing platforms, writing automated unit tests, and supporting CI/CD pipelines. At Qualitest, I designed a Spring Boot service with PostgreSQL, Redis, and RESTful Web APIs across AWS S3, Google Cloud Storage, and MinIO, then strengthened delivery with JUnit testing and Git-based reviews.

In my current role at Sperse, I build customer-facing FastAPI and TypeScript workflows serving more than 10,000 users. I have owned services end to end, added automated release evaluations to GitHub Actions, and implemented observable recovery for distributed workflows. That experience would help me contribute quickly to reliable claims-processing, invoicing, clearinghouse-integration, and automated-payment systems while learning the EDI 837/835 and HIPAA domain rigor the team requires.

CVS Health's goal of making health care more connected, convenient, and compassionate resonates with me because dependable software can remove friction from essential services. I would bring pragmatic problem solving, clear communication about blockers, and a continuous-learning mindset to the team while helping build billing systems that patients and providers can trust.

Thank you for your consideration. I would welcome the opportunity to discuss how my Java, SQL, AWS, testing, and API experience can support CVS Health's billing-platform modernization.

Sincerely,
Osaid Khan
