EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, SQL, Rust, HTML/CSS
Backend & APIs: Spring Boot, FastAPI, RESTful Web APIs, object-oriented programming, microservices
Data & Cloud: PostgreSQL, Redis, AWS (Lambda, Step Functions, S3, RDS, CloudWatch), GCP, MinIO
Testing & Delivery: JUnit, Jest, automated unit testing, Git, CI/CD, GitHub Actions, Docker, Kubernetes

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Built scalable Python and FastAPI services for a multi-agent CRM platform serving 10,000+ users, exposing validated RESTful Web APIs and routing requests across 40+ specialized agents with secure access control - Developed a React and TypeScript workflow application backed by durable Temporal services, owning end-to-end coding tasks, data contracts, error handling, and production support for long-running customer workflows - Created automated test and evaluation coverage for AI-agent releases and integrated it into GitHub Actions CI/CD pipelines, catching latency, accuracy, and safety regressions before production deployments - Implemented live execution tracking with Redis and structured observability, diagnosing technical blockers across distributed workflows and improving recovery for customer-facing operations - Built a LlamaIndex retrieval service with OpenAI embeddings and PostgreSQL/pgvector that answered product questions and generated ready-to-run REST API examples for customers	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic storage service in Java and Spring Boot with PostgreSQL, Redis, and RESTful Web APIs, handling secure uploads, downloads, and deletions across AWS S3, Google Cloud Storage, and MinIO - Wrote JUnit automated unit tests, reviewed code, and supported CI/CD delivery for backend services, applying object-oriented programming, Git branching, pull requests, and agile collaboration to ship reliable changes - Optimized relational SQL queries with indexes, window functions, and materialized views, reducing latency while preserving data integrity for business-critical reporting workflows - Orchestrated 100K+ weekly jobs with AWS Step Functions and Lambda, improving error recovery and preventing timeouts across asynchronous processing pipelines	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed coding-agent orchestrator that converts requests into dependency-aware task DAGs and executes them across multiple machines with retries, timeout handling, and observable status updates - Implemented fault-tolerant task scheduling and Git-based change workflows, preserving dependency order while recovering safely from failed or timed-out agent executions
