Dear Hiring Team,

I am writing to apply for the **AI Experience Engineer** role with **isolved**. My background building production AI systems, **agentic workflows**, and internal tooling aligns closely with your focus on turning workflow friction into engineering improvements, and I would bring a hands-on, pairing-oriented approach to embedding with product teams and improving the developer experience in real time.

At Sperse, I built a **multi-agent** CRM platform using **Python**, **LangGraph**, **LangChain**, and **FastAPI** that routes requests across 40+ specialized sub-agents with secure access control and **context-aware AI assistants**. I also built an **AI-assisted code review** pipeline integrating **OpenAI Codex** with a custom Bitbucket **MCP** server, automating daily PR triage across 25–30 PRs per week. To support reliable internal automation, I created a production **MCP** server with **FastMCP** that exposed 160+ backend actions to **AI assistants** and internal copilots, then wired GitHub Actions **CI/CD** pipelines with OpenTelemetry trace-based **evaluation frameworks** and **developer productivity metrics** to improve release quality before production. I also built **LlamaIndex**-powered **RAG** agents using OpenAI embeddings and **Pgvector** to answer product questions and generate ready-to-run **REST** API examples.

Earlier at Qualitest, I designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** that handles file uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs. I also reduced query latency by optimizing **PostgreSQL** with window functions, materialized views, and indexes, and orchestrated long-running jobs with **AWS Step Functions** to reduce **AWS Lambda** timeouts across 100K+ weekly executions. That experience strengthened my focus on reliability, performance, and systems that support real engineering work rather than adding friction.

isolved's purpose of helping People Heroes achieve measurable results, energize their organizations, and build better employee experiences is compelling to me, and the company's mission to provide the modern workforce with a future-proof platform to deliver awesome outcomes fast maps well to the kind of internal tooling I enjoy building. I am especially aligned with the values of **Embrace AI** and **Win as One**, and I would welcome the chance to help isolved build trustworthy AI tooling that improves how engineers work every day.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my experience with AI tooling, retrieval, internal copilots, and production automation can contribute to **isolved** and its mission.

Sincerely,
Osaid Khan
