EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages & Data: *Python*, Java, Kotlin, JavaScript/TypeScript, *JSON*, *CSV*, YAML, SQL

APIs & Integrations: *REST APIs*, OAuth, API key auth, webhooks, SFTP, file-based ingestion, CRMs, EHRs, CCaaS

Applied AI: LangGraph, LangChain, FastAPI, FastMCP, LlamaIndex, LLMs, prompt engineering, voice AI, Twilio

Cloud & Operations: Docker, Kubernetes, secret management, GitHub Actions, CI/CD, AWS, production debugging

Data & Frameworks: PostgreSQL, Redis, React, Spring Boot, Temporal, OpenTelemetry, Pgvector

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Designed and shipped **Python**, **FastAPI**, and **LangGraph** conversation workflows for a multi-agent CRM platform, translating loosely defined client requirements into production AI agents used by 10,000+ users
- Built and consumed **REST APIs** plus third-party integrations across 160+ backend actions using **OAuth**, API key auth, **webhooks**, and Pydantic-validated **JSON**, enabling secure client delivery and reusable product capabilities
- Owned full technical delivery for configurable agent workflows (YAML deployment configs, **Docker**, **Kubernetes**, and secret management), partnering with technical and non-technical stakeholders from implementation plans through production deployment
- Troubleshooted production issues across agent, workflow, and integration layers with **OpenTelemetry**, Redis, and Temporal; added trace-based tests and **CI/CD** release gates for latency, accuracy, safety, and reliable iteration
- Built ingestion and export pipelines for CRM data using **CSV**, file-based ingestion, webhooks, APIs, and SFTP-compatible delivery patterns; exposed structured engagement data through LlamaIndex, Pgvector, and ready-to-run API examples

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a production Storage Service in **Java** and **Spring Boot** with PostgreSQL and Redis, integrating S3, Google Cloud Storage, and MinIO through REST APIs and expiring signed URLs for reliable file-based ingestion
- Built data pipelines and optimized PostgreSQL with window functions, materialized views, and indexes, delivering structured data to React dashboards and reducing query latency for business stakeholders
- Orchestrated 100K+ weekly jobs with AWS Step Functions and Lambda, improving error recovery while debugging third-party integration failures across cloud infrastructure and deployment layers
- Worked self-directed in an agile, high-growth delivery environment, translating ambiguous requirements into implementation plans and communicating production outcomes across technical and non-technical stakeholders

PROJECTS

Dark Factory - orchestrator for PI agent | *Python, TypeScript, AI agents* github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that converts requests into dependency-aware task DAGs and executes multi-machine AI workflows with retries, timeout handling, and repeatable debugging
- Prototyped LLM and prompt engineering workflows with LangGraph-style orchestration, structured JSON tool calls, and production-minded validation to accelerate development, testing, and iteration
