EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, Java, Rust, Html/Css
Backend & Frameworks: React, FastAPI, Spring Boot, LangGraph, LangChain, FastMCP, LangSmith, Langfuse
Databases: PostgreSQL, MongoDB, Redis
AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway
Others: CI/CD, Docker, Git, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Engineered a React and TypeScript visual workflow platform with component-driven architecture, enabling operators to create, run, and manage agentic swarms end to end — with WebSocket-driven Redis Pub/Sub feeds for real-time execution status across operator dashboards - Built a full-stack Python FastAPI multi-agent CRM platform serving 10,000+ users, exposing RESTful APIs backed by PostgreSQL for routing requests across 40+ specialized sub-agents with tenant-aware JWT access control - Built GitHub Actions CI/CD pipelines for full-stack AI-agent deployments, running OpenTelemetry trace-based evals that flag latency, accuracy, and safety regressions across frontend and backend before production - Designed a Python backend service exposing 160+ typed RESTful endpoints via FastMCP with Pydantic validation and OpenTelemetry instrumentation, integrating microservice-oriented CRM workflows across multiple tenants - Built LlamaIndex-powered RAG agents using OpenAI embeddings and PostgreSQL pgvector, surfacing product documentation over GraphQL and REST query interfaces with semantic retrieval	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic Storage Service in Java and Spring Boot with PostgreSQL and Redis that handles file uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO via expiring signed URLs - Reduced query latency and improved scalability by optimizing PostgreSQL with window functions, materialized views, and indexes, then exposed the results through interactive React visualizations for business stakeholders - Orchestrated long-running jobs with AWS Step Functions, eliminating Lambda timeouts and improving error recovery across 100K+ weekly executions across a microservices-oriented, event-driven architecture	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed coding-agent orchestrator that decomposes large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with real-time retries and timeout handling - Designed the TypeScript task-dispatch layer with WebSocket-driven progress feeds, enabling operators to monitor live agent execution status and intervene on stalled or failed subtasks across the fleet
