Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Software Engineer** position with **Datagrate**. I bring over three years of professional experience in full-stack web applications, middleware integration, and cloud-native systems, along with a strong academic foundation as a Master of Science in Computer Science graduate from Pace University, NY.

Through my experience across two engineering roles, I have built and delivered production-grade backend systems that directly reflect **the expertise in middleware platforms and Java enterprise systems this position demands**. As a Software Engineer at Sperse, I delivered an MCP AI interaction layer that translates natural-language intents into validated tool calls across 1,000+ platform endpoints — serving as a core middleware component for automated customer actions. This required rigorous API contract design, input validation, and reliable coordination across enterprise software workflows. Prior to Sperse, as a Software Engineer at Qualitest, I contributed to the backbone infrastructure of an Identity & Access Management platform using Java, Spring Boot, and AWS, supporting thousands of users across 30+ applications in a high-stakes Java Enterprise environment. I also designed and developed a cloud-agnostic Storage Service using Python, PostgreSQL, and Redis that seamlessly integrated middleware operations across AWS S3 and Google Cloud Storage via signed URLs — giving me direct, hands-on experience with cloud-native, multi-environment integration. Furthermore, I developed backend workflows using AWS Step Functions to handle long-running data import jobs, ensuring reliable integration solutions and system stability. Together, these roles have prepared me to **contribute meaningfully to Datagrate's mission of implementing customized IT software solutions and middleware platforms** and drive impact within your motivated team of engineers.

My academic research experience has given me a rigorous foundation in model development, cloud-native deployments, and technical problem-solving — skills that translate directly into **the commitment to results, flexibility, and professional excellence this team values**. As an AI Researcher at the Pace Artificial Intelligence Lab, I conducted research on generative models using CUDA, PyTorch, and LoRA on an HPC cluster, demonstrating my ability to learn and implement complex technical concepts and modern tech stacks quickly. I managed the full model lifecycle — from training runs to inference optimization using vLLM and deployment via Hugging Face — ensuring secure and efficient cloud-native model serving. This experience sharpened my ability to present technical ideas and high-level solutions clearly, directly mirroring **the technical communication and cross-functional collaboration central to this role**. This background has shaped me into an engineer who builds with rigor and communicates with clarity, both of which I would bring to **Datagrate and its mission to connect enterprise systems seamlessly**.

I have always been passionate about **building and scaling the world's best application integration platforms** and envision myself contributing my talent to the furthering of **solving the most complex integration challenges for global clients**. I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, I look forward to connecting!

Sincerely,
Osaid Khan
