Dear Hiring Team,

I am applying for the Software Developer (Sitecore) role at TransPerfect. I bring over three years of experience building backend, integration, and workflow systems with **Java**, **Python**, **FastAPI**, **Spring Boot**, **PostgreSQL**, **Redis**, **React**, and **Bitbucket**-based delivery practices, along with a Master of Science in Computer Science from Pace University.

In my engineering roles, I have built the kind of integration-heavy systems this position requires. At Sperse, I built an **OpenAI Codex** and **Claude Code** assisted code review pipeline around **Bitbucket**, pairing manual review with code analysis, routing findings into the **issue tracking system**, and triaging 25-30 PRs/week to cut reviewer load by several hours. I also designed a **multi-agent** CRM platform in **Python**, **LangGraph**, **LangChain**, and **FastAPI** that served 10,000+ users by routing requests across 40+ specialized sub-agents with secure access control and reusable integration patterns for **Sitecore** add-ons and translation management systems. At Qualitest, I designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, optimized **SQL** interactions with window functions, materialized views, and indexes, and hardened long-running workflows with **AWS Step Functions** across 100K+ weekly executions. That background maps closely to your need to develop and maintain systems, optimize database interactions, troubleshoot reported issues, and document solutions that can be repurposed across other applications.

TransPerfect's vision to be the world's most trusted provider of global language and business solutions, empowering organizations to leverage AI, optimize global content, and drive performance in every market, aligns with how I work. I value **Quality** and **Service** because reliable software has to be both correct and useful for the people depending on it, and I try to approach delivery with the same consultative, proactive mindset reflected in your core values. I would welcome the opportunity to contribute to this team and its mission, and to support product, engineering, and client conversations with clear technical communication.

Sincerely,

Sincerely,
Osaid Khan
