Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Software Engineer / Associate / Senior Developer** role with **Ansco & Associates, LLC**. I bring hands-on experience delivering production systems, along with a Master of Science in Computer Science from Pace University, and I am excited about building adaptable software in a high-velocity, office-based environment.

In my recent engineering roles, I have delivered the same kind of technical depth this position requires: building a platform layer that supports **Just-in-Time solutions** across **1000+ platform endpoints** with **Interruption-Resilient Design**; creating **Rapid Application Engineering** accelerators for **Low-Code platforms** (including **OutSystems** delivery patterns); and converting ambiguous requirements into functional tools through a **Product Owner mindset** and active **Stakeholder Consultation**. I have also built data systems that align with your **Downstream Transparency** principle by designing downstream **SQL** schemas/views used in **Power BI**, and I have implemented reliable **asynchronous messaging** flows aligned to **AMQP/RabbitMQ** patterns using **AWS Step Functions** for background processes and **scheduled tasks** in Linux and Windows server environments.

I am particularly aligned with Ansco's mission to "Serve customers skillfully. Deliver results with discipline. Accountable in all we do." and your vision, "To connect America." The values of **Safety** and **Innovation** strongly match how I work: I focus on dependable delivery under changing requirements while continually improving performance and architecture to solve operational constraints cleanly.

I would value the opportunity to contribute to Ansco's goal of connecting America through disciplined, customer-focused engineering execution. I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
