Dear Hiring Team,

I am writing to apply for the Software Engineer II role at Vitu. My recent experience building production systems across **Python**, **FastAPI**, **React Flow**, **TypeScript**, **Java**, **Spring Boot**, **PostgreSQL**, **Redis**, and **AWS** maps closely to the role's emphasis on building and maintaining software across multiple platforms, improving maintainability, and reducing technical debt. At Sperse, I helped ship a **multi-agent** CRM platform serving 10,000+ users, a client-facing workflow builder with durable execution, an **OpenAI Codex**-powered Bitbucket **MCP** review pipeline, and **GitHub Actions CI/CD** with **OpenTelemetry** evals to catch **latency**, **accuracy**, and **safety** issues before production. At Qualitest, I supported a cloud-agnostic storage service across **Google Cloud Storage**, **S3**, and **MinIO**, tuned **PostgreSQL** for lower latency, and orchestrated 100K+ weekly jobs with **AWS Step Functions**.

What makes this opportunity a strong fit is the balance between product delivery and operational ownership. The Vitu role calls for thoughtful contributions to technical architecture, automated tests, troubleshooting, and ongoing application support; that is the same work pattern I have followed when building secure backend actions behind **FastMCP**, maintaining durable **Temporal** workflows, and keeping production systems observable through monitoring and trace-driven evaluation. I am comfortable working across client-facing web applications and backend services, and I enjoy turning stakeholder feedback into practical changes that improve reliability and user experience.

Vitu's mission to transform interactions between the private sector and government agencies, along with its employee-first culture of support and inclusion and collaborative, original approach, is exactly the kind of environment where I want to contribute. I would welcome the opportunity to help build software that makes vehicle and government workflows faster, clearer, and more dependable.

Thank you for your consideration.

Sincerely,
Osaid Khan
