Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the Software Engineer I role with Axon. I bring over three years of experience building backend systems, workflow orchestration, and data services in **Java, Python, Spring Boot, FastAPI, PostgreSQL, Redis**, and **AWS**, along with a Master of Science in Computer Science from Pace University.

At Sperse, I built a **multi-agent** CRM platform in **Python, FastAPI, LangGraph**, and **LangChain** for **10,000+ users**, routing requests across **40+ specialized sub-agents** as a **web-scale data system** while partnering with **Product and Design** to ship **end-to-end features**. I also owned **architecture design meetings** for a **React Flow** and **TypeScript** workflow builder backed by **Temporal** for durable, resumable execution, built an agentic **code reviews** pipeline integrating **OpenAI Codex** with a custom **Bitbucket MCP** server to triage **25–30 PRs/week**, created a **FastMCP** server exposing **160+ backend actions**, and shipped GitHub Actions **CI/CD** with OpenTelemetry trace-based evals to protect quality and performance. At Qualitest, I designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, turning **SQL** and **NoSQL** data stores into one backend surface across **Google Cloud Storage, S3**, and **MinIO**, then optimized **PostgreSQL** and orchestrated **100K+** weekly jobs with **AWS Step Functions** for **high throughput** and **high availability**. That combination maps directly to Axon's need for engineers who can own **end-to-end features**, participate in **code reviews** and **architecture design meetings**, and make data accessible and actionable.

Axon's mission to **Protect Life**, and its focus on **Preserve Truth** and **Accelerate Justice**, strongly resonates with me. I am drawn to the opportunity to help build software that supports public safety decisions, and I value the kind of **cross-team collaboration** and rigorous engineering culture that your software team emphasizes. I would welcome the chance to contribute my backend and data-systems experience to this mission and help Axon protect more lives in more places. Thank you for your consideration; I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com.

Sincerely,
Osaid Khan
