EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, Java, Rust, Html/Css
AWS Services: Lambda, API Gateway, S3, CloudWatch, EC2, RDS, Step Functions, CloudFormation, CloudFront
Backend & Frameworks: React, Spring Boot, FastAPI, LangGraph, LangChain, FastMCP, LangSmith, Langfuse
Databases: PostgreSQL, MongoDB, Redis
Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Architected a full-stack, distributed multi-agent CRM platform using Python, LangGraph, and FastAPI with a React frontend, routing 10,000+ users across 40+ microservices-decomposed sub-agents with JWT-propagated tenant-aware access control - Created a stateless, containerized MCP server in Python and FastMCP exposing 160+ API Gateway-style tool endpoints to AI agents, enabling secure multi-tenant CRM workflow automation with OpenTelemetry observability across all customers - Built GitHub Actions CI/CD pipelines for Agile AI-agent deployments, running OpenTelemetry trace-based evals per release to enforce quality gates on latency, accuracy, and safety metrics — enabling continuous delivery aligned with Scrum sprint cadences - Developed a React and TypeScript visual workflow platform for designing and executing distributed, stateless agentic swarms using Temporal for durable execution and Redis-backed real-time status tracking from the workflow dashboard	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic, stateless Storage Service in Java and Spring Boot with PostgreSQL and Redis that handles file operations across AWS S3, Google Cloud Storage, and MinIO via expiring signed URLs — applying disposable, reactive, distributed patterns for multi-environment backend design - Orchestrated long-running jobs with AWS Step Functions and Lambda, eliminating timeout failures and improving fault-tolerant error recovery across 100K+ weekly executions through reactive, distributed workflow decomposition - Improved full-stack scalability by optimizing PostgreSQL with window functions, materialized views, and indexes, then exposing results through interactive React visualizations for business stakeholders, closing the loop between server-side performance and front-end data delivery	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed coding-agent orchestrator that decomposes large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents — implementing stateless, reactive, microservices-style patterns with retries and timeout handling - Designed a containerized, event-driven task scheduling layer that dynamically assigns DAG nodes to agent workers, enabling disposable execution environments and cloud-native horizontal scaling consistent with modern application design patterns
