Dear Hiring Team,

I am writing to apply for the **Software Engineer III (Full Stack)** role with **6sense**. I bring more than five years of professional experience building production software across **Java**, **Spring Boot**, **React**, **TypeScript**, **FastAPI**, **PostgreSQL**, **Redis**, **AWS**, and **CI/CD**, along with a Master of Science in Computer Science from Pace University.

At Sperse, I built a **customer-facing** multi-agent CRM platform in **Python**, **FastAPI**, **LangGraph**, and **LangChain** that delivered **scalable full-stack applications** for 10,000+ users, routing requests across 40+ specialized sub-agents with tenant-aware access control and **application security best practices**. I also shipped a **React** and **TypeScript** workflow builder with **HTML** and **CSS** components, created a custom Bitbucket **MCP** server for an **OpenAI Codex** review pipeline, and wired GitHub Actions **CI/CD** with automated testing so our **AI-powered developer tools** and autonomous agents could improve delivery quality without sacrificing reliability. At Qualitest, I designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, exposing **RESTful APIs** across cloud platforms such as **AWS S3**, Google Cloud Storage, and MinIO while driving technical design discussions and architecture decisions; I then tuned **PostgreSQL** for large datasets and orchestrated asynchronous processing with AWS Step Functions to improve high availability and root-cause analysis.

My academic and project work has strengthened the same engineering discipline this role demands. I built a distributed coding-agent orchestrator that applies **data structures**, **algorithms**, and **system design** to break work into dependency-aware task DAGs, and that experience reinforced how important clean, maintainable, well-tested code and clear communication are when building reliable systems. **6sense's** mission to make every signal, every AI agent, and every revenue team more effective aligns with the way I like to work: owning the outcome, shipping durable fixes, and collaborating closely with engineers, product partners, and designers. I also value **Win as One Team** and **Stay Curious**, and I would welcome the chance to contribute that mindset to **6sense**.

Thank you for your time and consideration. I would be glad to discuss how my experience building full-stack systems, automation workflows, and production-grade backend services can help **6sense** deliver better software for its customers.

Sincerely,  
Osaid Khan
