Hiring Team
Capgemini

Dear Hiring Team,

I am applying for the Junior Java Spring Boot & AWS Developer role at Capgemini. At Qualitest, I developed and maintained a Java and Spring Boot service with PostgreSQL, Redis, and RESTful APIs across AWS S3, Google Cloud Storage, and MinIO. I also supported Git-based reviews and CI/CD releases, optimized relational-database performance, and orchestrated more than 100,000 weekly jobs with AWS Step Functions and Lambda—directly matching your need for reliable AWS-hosted applications and production support.

In my current role at Sperse, I build and operate customer-facing FastAPI and TypeScript services for more than 10,000 users. I troubleshoot distributed workflows, implement observable recovery, and maintain GitHub Actions pipelines with automated release evaluations. I also created an OpenAI Codex integration that automates PR triage, giving me practical experience with the AI-assisted development tools Capgemini values.

Capgemini's purpose of unleashing human energy through technology for an inclusive and sustainable future, together with its values of trust and team spirit, resonates with how I approach engineering: collaborate closely, communicate problems clearly, and use technology to deliver dependable business outcomes. I would be excited to support financial-services applications while growing deeper expertise in Java, Spring Boot, AWS, PostgreSQL, security, and compliance.

Thank you for your consideration. I would welcome the opportunity to discuss how my backend, cloud, testing, and application-support experience can contribute to Capgemini's team in Bloomington.

Sincerely,
Osaid Khan
