Dear Hiring Team,

I am applying for the **Software Engineer** role at **SkyLink**. My background is in building production AI agents and backend systems in **Python**, including a **multi-agent** CRM platform in **LangGraph**, **LangChain**, and **FastAPI** that routes 10,000+ users across 40+ specialized sub-agents, an **OpenAI Codex** code-review pipeline backed by a custom **MCP** server, and trace-driven evaluation suites that replay real production conversations across **LLMs** and model versions to catch latency, tool-call accuracy, and safety regressions.

At **Qualitest**, I also worked on backend infrastructure that required operational discipline: long-running workflows with **AWS Step Functions**, a cloud-agnostic storage service with **PostgreSQL** / **Postgres** and **Redis** across **Google Cloud Storage**, **S3**, and **MinIO**, and **PostgreSQL** tuning that improved query latency and surfaced the results through **React** dashboards. That combination of orchestration, backend reliability, and shipping production systems maps directly to SkyLink's work on conversational travel booking that has to connect content, availability, pricing, and fulfillment reliably and quickly.

SkyLink's focus on **AI-driven travel innovation**, **conversational automation**, and **seamless, smart booking experiences** is the kind of product direction I want to build against. I would value the chance to help ship an AI agent that makes travel faster, simpler, and more reliable for enterprise users while staying grounded in real workflow integration and operational reality.

You can reach me at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
