EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css

Backend & Frameworks: LangGraph, LangChain, FastMCP, LangSmith, Langfuse, FastAPI, React, Spring Boot, LlamaIndex, Google ADK, OpenAI Agents SDK, Claude Code

Databases: PostgreSQL, Redis, MongoDB

AWS Services: Lambda, Step Functions, EC2, RDS, S3, CloudWatch, API Gateway, CloudFront, CloudFormation

Others: Git, CI/CD, Docker, Kubernetes

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built a **multi-agent** CRM platform in **Python** with **LangGraph**, **LangChain**, and **FastAPI**, routing 10,000+ users across 40+ specialized sub-agents with secure access control, prompt-injection defenses, and tenant-aware tool execution
- Shipped an agentic code-review pipeline integrating **OpenAI Codex** with a custom **MCP** server, automating daily PR triage across 25-30 PRs/week and cutting manual reviewer load by several hours
- Designed a production **MCP** server with **FastMCP** exposing 160+ LLM-callable actions over a multi-tenant backend, using instrumentation and logging to keep tool calls safe, observable, and debuggable
- Built OpenTelemetry trace-driven eval suites that replayed real production conversations across **LLMs** and model versions, curating datasets for latency, tool-call accuracy, and safety regressions and wiring results into GitHub Actions **CI/CD** gates
- Delivered **LlamaIndex**-powered **RAG** agents with OpenAI embeddings and **Pgvector**, plus durable user-defined workflows in **React Flow**, giving teams a way to launch and monitor agent swarms from the dashboard

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Orchestrated long-running jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts and improving error recovery across **100K+** weekly executions
- Designed a cloud-agnostic Storage Service in **Java** and **Springboot** with **PostgreSQL** / **Postgres** and **Redis** that handled file uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs
- Reduced query latency and improved scalability by optimizing **PostgreSQL** with window functions, materialized views, and indexes, then exposed the data through interactive **React** visualizations for business stakeholders

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent **orchestration** layer that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries, timeout handling, and failure recovery
- Added observability and control hooks for planning, tool execution, and handoff between agents, making the system easier to debug and extend under concurrent workloads
